

AMFIT

Precise and repeatable digital Rx result in patient acceptance greater than 97%, with excellent clinical efficacy.

# Better Quality

If you could prescribe foot orthotics that had the same efficacy, for all therapeutic applications, as plaster, but were

- much faster to produce
- less expensive
- let you see the results in 3D before manufacture
- gave you the unlimited – and instant – ability for modifications, and
- result in higher patient compliance (acceptance vs tolerance),

would your practice be improved?

Amfit's digital Footfax™ system makes it not only possible, but easy.

- CAD/CAM manufacturing precision
- Accurate digital casting
- 100% guaranteed, risk-free

## Results

- Far higher patient acceptance, with average satisfaction rates of more than 97% (for better real-world efficacy)
- Absolute, fast and convenient control over design and modification
- Repeatable, 100% consistent results

## Proof
