

For more than 23 years, Anatomical Concepts has held itself to a simple philosophy-

It's about the PATIENTS!

For Ambulatory or Recumbent patients!

The Standard APU® Orthosis

The APU® Orthosis has an adjustable aluminum posterior upright that is designed to provide a more precise and simplified method of setting the ankle/foot complex in the sagittal plane. This unique patented single jointed upright provides a ROM of 30° plantar flexion and 30° of dorsi flexion. APU® Orthosis can be used on the ambulatory patient as well as the recumbent patient.

The Bariatric APU® Orthosis

The Bariatric APU® was designed for the larger patients in mind and offers the same functionality of the standard APU® (Adjustable Posterior Upright) Orthosis utilizing the heavy duty APU® joint. The aluminum heel connecting bar is 3/16" compared to the standard APU® heel connecting bar which is 1/8". The Bariatric APU® also offers a deeper heel channel compared to the standard PRAFO® Orthosis heel channel.
