

# PreStride™ Stance Control Assessment Orthosis Now available with GX-Assist

The **PreStride™** allows practitioners to make an informed decision regarding the suitability of Becker Stance Control Technology prior to manufacturing a definitive orthosis.

The **PreStride** is a modular and fully adjustable stance control assessment tool that uses a cabling system to automatically unlock the orthotic knee joints at the end of stance phase. It may be fitted, in a controlled clinical setting, to most adults who are between 5'2" and 6'2" in height.

Intended as an assessment tool for the FullStride™ and SafetyStride™ stance control systems, the **PreStride** now

Model 9007  
with GX-Assist

also comes equipped with the **GX-Assist**. The **GX-Assist** accommodates individuals with significant weakness of hip musculature with use of a pneumatic spring to assist in knee extension during the swing phase of gait. The **GX-Assist** can be easily attached or detached from the lateral side of the orthosis as necessary.

Becker Orthopedic offers the largest selection of stance control componentry available. Call us today to learn more about the **PreStride** and how we can assist you in making stance control a part of your practice.

Now available with  
**GX-Assist**
