

Coyote[®] Composite

Does carbon make your lab cringe?

Free yourself from the irritation of carbon fiber braid! Made from basalt, a volcanic rock, our proprietary braided Coyote Composite was specifically designed for prosthetic and orthotic

use. It creates a socket that's slightly less rigid than carbon, with much higher impact resistance (and a lot less itch), making it ideal for flexible laminated sockets and AFOs.

New lower prices!

3", 4", 6", 8", and 10" sizes.
In rolls of 80 or 20 ft.
