

This is just the beginning

15mm slimmer.

119 grams lighter.

High Activity Frame and improved hydraulics give it a higher activity rating.

A greater 175-degree flexion angle.

Patient weight limit increased from 220 to 275 pounds.

The redesigned 3R60 knee is just the beginning in a line of Otto Bock knees. The 3R60 with its Ergonomically Balanced Stride has been a highly popular knee joint since its introduction, giving thousands of amputees the confidence that comes with a consistent, natural gait.

And now, with the new 3R60, Otto Bock has made a great knee even more attractive. Slimmer, lighter, more active, it's a knee that's been improved from head to toe.

For more information on the 3R60 or any other knee in the Otto Bock family, call 800.328.4058 (U.S.) or 800.655.3327 (Canada) or visit www.ottobockus.com
