

Spinal Technology is your **go-to fabricator** for your 3D scanner files.

Leading the way to help your orthotic workflow.

We were one of the first fabricators to build a library of torso types using CAD-CAM technology. When new technology looks promising for patient outcomes, we invest time and money to make it work.

We are the go-to fabricator for orthotists who are using state-of-the-art 3D scanning to capture their patient's measurements. Send us your raw universal file types such as: AOP, STL, OBI, or PLY scan data and comments; we will fabricate the brace according to your exact specifications. Quality fabrication with the turnaround you've come to expect from Spinal Technology.

We'll use your 3D scanning data for custom fit and fabrication.

Today, and into the future, you can count on Spinal Technology to always be ahead of the curve when new technology is introduced that will benefit patients and orthotists.

Got scanner/scanning questions, or need file type help call us 800 253 7868.
